

Why Veneers Are a Great Choice for Adults with Small Teeth?

Are your teeth too small? Do you wish they were bigger and more pronounced? You're not alone. In fact, many people feel self-conscious about the size of their teeth. The good news is that there is a way to make your teeth look bigger without resorting to surgery – veneers.

Veneers are thin, tooth-colored shells that are attached to the front surfaces of your teeth. They are used to correct a wide variety of cosmetic dental issues, including teeth that are too small. [Veneers for small teeth](#) can make your teeth appear longer, wider, and more symmetrical. As a result, they can give you a smile that looks completely natural.

Do Dental Veneers Make Your Teeth Bigger?

The answer to this question, “**Do dental veneers make your teeth bigger?**” is a little complicated. Veneers do not make your teeth bigger.

In fact, they can actually make them appear smaller if they are not the right size and shape for your teeth. If you’re unhappy with the size of your teeth, veneers might be right for you. Veneers are thin shells that are attached to the front surfaces of teeth in order to change their appearance. They can be used to correct a wide variety of cosmetic dental issues, including teeth that are too small. Veneers can make your teeth appear longer, wider, and more symmetrical. As a result, they can give you a smile that looks completely natural.

How Veneers Work

Veneers are attached to the front surface of your teeth using a strong bonding agent. The entire procedure usually takes two visits to the dentist. During the first visit, the dentist will take an impression of your teeth and send it off to a dental laboratory where the veneers will be made.

In the meantime, the dentist will fit you with temporary veneers. Once the permanent veneers are ready (usually within 2-4 weeks), you’ll return to the dentist for a second appointment during which the temporary veneers will be removed and the permanent veneers will be attached using a bonding agent.

Veneers are made of porcelain or composite resin material. Porcelain veneers are more stain resistant than composite veneers and they often last longer (10-15 years vs. 5-7 years for composite). However, they also tend to be more expensive than composite veneer procedures.

Are Veneers Right for You?

To determine if veneers are right for you, it’s important to consult with a dentist who offers **dental veneers in Barrie**. During your consultation, your dentist will assess the size and shape of your teeth to see if veneers are a viable option. He or she will also discuss the pros and cons of veneers with you so that you can make an informed decision about whether or not they’re right for you.

If you’re unhappy with the size of your teeth, veneers might be right for you. Veneers are thin shells that are attached to the front surfaces of teeth in order to change their appearance. They can be used to correct a wide variety of cosmetic dental issues, including teeth that are too small. Veneers can make your teeth appear longer, wider, and more symmetrical.
