# AUTOMATIC GATE BARRIER SUPPLIERS IN UAE

Gate Barriers are generally used in commercial and industrial applications such as controlling access to parking lots and garages in business complexes, airports, residential buildings, and public facilities. These units can be operated automatically by card reader, keypad, remote control, intercom, or manually controlled within a guard station or kiosk. A regular service and maintenance is essential to any asset in order to preserve and extend their usable life span. It is a cost-effective arrangement to avoid costly down times that disrupt the continuity of the operations.
